High Performance

Rutland Plastic Technologies introduces the "Endurance Plus" series of inks for polyester and performance fabrics. Designed for garments that are lighter weight, more stretchy and more temperature sensitive than traditional sports garments.

Printers are finding themselves challenged to find the right solution to print designs that meet the sheerness and drape requirements of these fabrics and at the same time avoid the dreaded problem of polyester fabric dye migration.

The "Endurance" ink products are the best plastisol solution for this application. Curing temps are between 280 and 300 degrees Fahrenheit.

Available as a base to mix with Rutland's C3 colors for pantone matching. Also available is a Black, White and Barrier Gray base.

The official launch of these new products will be at the ISS Long Beach show in January.

Kits will soon be available for purchase.

"Always put your Fears behind you and your Dreams in front of you"

What's Happening?

December 25
Christmas Day

January 16-18
ISS Show
Long Beach, CA
booth #1553

Happy Holiday's to all!!!!

SPR will be closed Thursday, December 25 and Thursday, December 31

Round to Oval

M&R Introduces the "Stryker" Automatic Oval Printing Press. The new Stryker oval press begins with a 10 station base module. That base module can be expanded in 6-station increments to create up to 52-station configurations.

Other than the end stations, there are no restrictions on print head placement. Stryker's layout can be tailored to almost any production requirement. Since Stryker's oval shape takes up less floor space than comparable carousel presses, it makes more efficient use of available production area.

Maximum print area is 24" x 33" but can print up to 39" x 33" in alternating print heads.

This press is ideal for t-shirts and cut pieces

and boasts a multitude of impressive standard features.

Servo drive and A/C print heads are standard with tool free off contact adjustments.

Included is a maintenance minder to alert when scheduled maintenance is due. Also included is M&R's new laser locator system and squeegee dam as well as the adjustable ink dip and park system.

All this and more make the M&R Stryker press the most versatile press on the market today.

Tech Tip: As the year comes to a close, now is the best time for clean up and equipment maintenance. Clean out the inside of your dryer and all vents. Check presses for broken or faulty parts and replace. Level pallets on the presses. Check fire extinguishers and service if necessary. Do a little painting here and there so the shop looks nice and let's all get ready for a great new year!
